

One-dimensional array

It is an array in which the components are arranged in a list form.

Example (1):

Write a program in the C++ language to print array A, which has five elements (-1, 33, 26, -5, 9) on the screen.

Sol.

```
#include <iostream>
using namespace std;
int main()
{
    int A[5]={-1, 33, 26, -5, 9 };
    for(int i=0;i<=4;i++) cout<<A[i]<<" ";
    cout<<""<<endl;
    return 0;
}
```

Output:

-1 33 26 -5 9

Example (2):

Write a program in C++ language to print multiplication of array A and B on the screen, these arrays have ten elements entering from keyboard.

Sol.

```
#include <iostream>
using namespace std;
int main()
{
    int A[5],B[5];    // declaration about two arrays A and B

    cout<<"enter the elements of [A] array";
    for(int i=0;i<=4;i++)
```

```
{
    cin>>A[i];
}
cout<<"enter the elements of [B] array";
for(int i=0;i<=4;i++)
{
    cin>>B[i];
}
cout<<" multiply [A] *[B] ="<<endl;
for(int i=0;i<=4;i++)
{
    cout<<A[i]*B[i]<<" ";
}
return 0;
}
```

Output:

```
enter the elements of [A] array: 1 2 3 4 5
enter the elements of [B] array: 2 3 4 5 6
multiply [A] *[B] =
2 6 12 20 30
```

Laboratory task to groups A, B, C:

Write C++ program, to split the negative numbers and positive numbers founded in one array with size 10 into two arrays?
